"Sweeping Away The Competition..."

iPhone/iPad® and Android® "SysAdmin" App for QAD®

SysAdmin is an Mobile APP that is integrated into your QAD server(s) which will allow you to execute your preconfigured backend server Operating System commands to assist with remote mobile maintenance.

Imagine being able get the status of all QAD related server components and in concert to have the ability to diagnosis/repair related processes securely from your Mobile device. There is no limitation to the functions the SysAdmin tool can execute since it will perform any Operating System commands you have pre-defined in the SysAdmin utility.

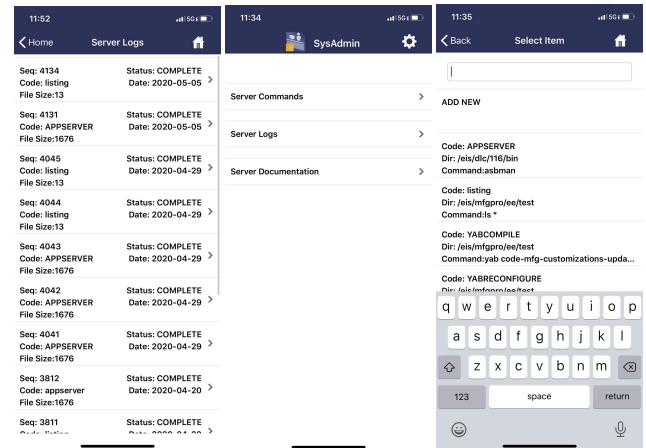

Some examples below of the type of operations that can be performed.

NOTE: There are individual date/time stamp detailed logs stored for each command executed

- Execute any QAD YAB command
- Refresh Test QAD database with Production QAD database
- Check the status of the Progress databases
- Check the status of the Progress OE database replication
- Check the status of the Tomcat Server
- Check the status of QAD EE Daemons
- Check the status of Progress Application and Web Speed servers
- Restart QAD Databases
- Restart Progress Application and Web Speed servers
- Check Operating System Disk Space
- Check Operation System Memory Usage

NOTE: List is unlimited since user defined Operating Scripts

- Predefine any QAD Operation System YAB related commands
- Predefine any Operating System commands
- Real time execution of commands
- Real time logging of command execution
- Historical logging of commands executed with related output
- Real time Documentation access (PDF, Excel, Word) to assist with server maintenance
