BROOM STREET SOFTWARE

## *"Sweeping Away The Competition..."*

BOM Desk™

BOM Desk is an app that is integrated into your QAD® system and will allow you to review and search product BOM (Bill of Material).

The app allows the engineer/technician to drill down into a BOM, search for parts in machines, and assist with servicing and/or replacing these parts.

The engineer/technician can scan the machine or part bar code or key it in, which will provide you with the detailed schematics. They can then proceed to "click" on the schematics and drill into the retreated BOM components. They can also search an item by code or description, and when they get the results, they can click on a part and the part will highlight on the schematics. Features include:

- Unique system for mapping and displaying machines parts graphically

- Drill into graph to identify the machine parts

- Find part locations

- Availability to order from the warehouse

- Part of the Mobile Desk solution

- Integrated with QAD systems
