

BROOM STREET

SOFTWARE

LABEL PRINTING

Label Printing For QAD And Other Accessories/Equipment

Overview

Input / Output devices are useless without integration with company's legacy systems. Full integration with the ERP system and/or any other 3rd party software is key to get the full benefit of your equipment. Your operations and processes will suffer and will not be powerful without an adequate output.

Broom Street connects all versions of QAD to the world of Accessories and Equipment, where you bring the accessories and equipment and we bring the integration.

Do you need several devices to work together? Maybe a scale and label printer? No problem!

We work with variety of label printers, like Zebra, Datamax, and Brother, and we work with any scale that can connect via RS232 or USB.

Data flows between the components using our E4 I/O Integrator. E4 is an infrastructure software that allows many applications to be built upon it, including CRM, P/O portals, E-Commerce and Shopping cart, and, of course, Integration to I/O Equipment.

E4 I/O Integrator is an open and dynamic system that works with QAD and/or other 3rd party software. We connect to Scales, Label Printers, Scanners, Barcodes, Printers and mobile devices.

E4 I/O Integrator is multilingual as it can be adjusted to English, Spanish or even Japanese, and it can also speaks ZPL, CDL, and even 1010001110.

How does it work?

- E4 I/O Integrator
- Printer label files written in native printer language
- Local or Network bridge software that can be VBS, Java, Scripting
- Integrated screens for Production processing
- Barcoding
